Training Guidance

- Progressive Overload: Aim to add weight, reps, or sets each week within your target ranges.
- RIR (Reps in Reserve): Start each block at RIR 2. Push closer to failure as the block progresses.
- Deloads: Take a deload week every 7 weeks — reduce volume by 40-50%, keep intensity.
- Exercise Swaps: You can swap exercises within the same movement pool. This keeps training fresh.
- Protein Priority: Hit 170-190g protein daily. This is your most important macro.
- Recovery: Sleep 7-9 hours. If recovery is poor, reduce volume by 1-2 sets per muscle group.
- Track Everything: Log your sets, reps, and weight. What gets measured gets managed.

Injury Considerations

Areas to protect: lower_back

The app will automatically avoid exercises that stress these areas.
